A **conjunction** is a word that joins two words or phrases together. Sentences can be combined using conjunctions. If the two sentences have the same subjects, you can use **and** between the verb phrases. Usually a comma is needed before the conjunction.

The fish jumped out of the sea.
 The fish landed in our boat.
 The fish jumped out of the sea, **and** landed in our boat.

The dog ran in circles.
 The dog chased his tail.
 The dog ran in circles, **and** chased his tail.

Rewrite the following sentences, combined into one sentence using a **conjunction**, and a comma if necessary.

- I love the beach.
I love the sun.

- She wanted to go to Key West.
She wanted to go to Bahia Honda.

- I saw a butterfly on the nature trail.
I saw a lizard on the nature trail.

- We wish for a happy holiday season.
We wish for a happy new year.

Connectors worksheet pdf.

Example 1: Given: p: Ann is on the softball team. q: Paul is on the football team. Problem: What does pq represent? Solution: In Example 1, statement p represents, "Ann is on the softball team" and statement q represents, "Paul is on the football team." The symbol \wedge is a logical connector which means "and." Thus, the compound statement pq represents the sentence, "Ann is on the softball team and Paul is on the football team." The statement pq is a disjunction. Definition: A disjunction is a compound statement formed by joining two statements with the connector OR. The disjunction "p or q" is symbolized by \vee . A disjunction is false if and only if both statements are false; otherwise it is true. The truth values of pq are listed in the truth table below. p q \vee p \vee q T T T F T F T F F F Example 2: Given: a: A square is a quadrilateral. b: Harrison Ford is an American actor. Problem: Construct a truth table for the disjunction "a or b." Solution: a b T T T F F T F T F T F F Example 3: Given: r: x is divisible by 2. s: x is divisible by 3. Problem: What are the truth values of rs? Solution: Each statement given in this example represents an open sentence, so the truth value of rs will depend on the replacement values of x as shown below. If x = 6, then r is true, and s is true. The disjunction rs is true. If x = 8, then r is true, and s is false. The disjunction rs is true. If x = 15, then r is false, and s is true. The disjunction rs is true. If x = 11, then r is false, and s is false. The disjunction rs is false. Example 4: Given: p: 12 is prime. false q: 17 is prime. true r: 19 is composite. false Problem: Write a sentence for each disjunction below. Then indicate if it is true or false. 1. p \vee q 12 is prime or 17 is prime. true 2. p \vee r 12 is prime or 19 is composite. true Example 5: Complete a truth table for each disjunction below. 1. a or b 2. a or not b 3. not a or b a b T T T F F T T F F F a b ~b a ~b T T F T F T T F F F F T T a b ~a ~ab T T F T T F F F F T T T F T T Students sometimes confuse conjunction and disjunction. Let's look at an example in which we compare the truth values of both of these compound statements. Example 6: Given: x: Jayne played tennis. y: Chris played softball. Problem: Construct a truth table for conjunction "x and y" and disjunction "x or y." Solution: x y xy T T T T T F F T F T F F F F F F F With a conjunction, both statements must be true for the conjunction to be true; but with a disjunction, both statements must be false for the disjunction to be false. One way to remember this is with the following mnemonic: "And" points up to the sand on top of the beach, while "or" points down to the ore deep in the ground. Summary: A disjunction is a compound statement formed by joining two statements with the connector OR. The disjunction "p or q" is symbolized by \vee . A disjunction is false if and only if both statements are false; otherwise it is true. Exercises Directions: Read each question below. Select your answer by clicking on its button. Feedback to your answer is provided in the RESULTS BOX. If you make a mistake, choose a different button. 1. Which of the following sentences is a disjunction? 2. Which of the following statements is a disjunction? 3. A disjunction is used with which connector? 4. If a is false and b is true, what is the truth value of a \vee b? 5. Given: r: y is prime. s: y is even. Problem: Which of the following is a true statement when y is replaced by 3?
